Post Study Work Visa, valid until May 2029

18 May 2026

Hiring Manager
Acme Payments Ltd

Re: Senior Ruby on Rails Engineer

I am writing to apply for the Senior Ruby on Rails Engineer role at Acme Payments Ltd. With 6+ years building production Rails applications — including PCI-DSS compliant payment systems handling live transactions across multiple markets — I am confident I can contribute meaningfully to your payments platform from day one.

At WellDev I helped integrate a Credit Card Vault into a multi-region travel booking platform and connected Stripe with 3D Secure, Paygate, and PayFast for live financial processing. I designed GraphQL and RESTful APIs, built Elasticsearch-backed search for the booking engine, and advanced to Senior Engineer and technical lead, running code reviews and mentoring junior engineers within an ISO 27001 certified environment. At Webbernet I was the sole developer on a legacy Rails modernisation, where I also reduced a critical endpoint's load time by approximately 75% through SQL and N+1 query optimisation — the kind of work directly relevant to a high-throughput payments platform.

I am based in Auckland, hold a Post Study Work Visa valid until May 2029, and am available for hybrid work. I would welcome the opportunity to discuss how my background in Rails, payments, and team leadership aligns with what you are building.

Kind regards,
Alex Rupom Hasdak
